

Health, 2011 Census of Population

This short article contains some of the health results from the 2011 Census of Population. The figures have been downloaded from the [Office for National Statistics](#) website and complement a range of other census data sets that have been added to our website.

The 2011 results

On the day of the census, March 27th 2011, a total of 8.5% of people in England and Wales had some major form of limiting long-term illness. For the Lancashire-12 area, the percentage was higher at 9.8% whilst for the Lancashire-14 area, the figure was 10.3% (see Table 1). Ribble Valley (7.1%) was the only Lancashire authority to record a rate that was below the national average, whilst in South Ribble, the percentage was on a par with the England and Wales figure. Nine Lancashire authorities recorded rates in excess of 10% including Blackpool where the percentage was a substantial 13.5%.

For England and Wales, 82.1% did not have their day-to-day activities limited by health. The Lancashire-12 and 14 area percentages were 79.9% and 79.4% respectively. Once again, Ribble Valley (83.3%) was the only authority to record a percentage in excess of the national average. In comparison, Wyre and Blackpool recorded the lowest percentages in Lancashire of 76.2% and 74.4%.

Table 2 indicates that 45.9% of residents in Lancashire-12 described themselves as being in very good health, whilst 6.3% describe themselves in bad or very bad health. For Lancashire-14, the percentages were 45.3% and 6.7%. For England and Wales as a whole, a higher percentage of 47.1% were said to be in very good health and 5.6% in bad or very bad health.

The results in Table 2 naturally show a similar pattern to Table 1. Ribble Valley was the only Lancashire authority where over 50% of people considered their health to be very good. Chorley and South Ribble were the only other two areas to record rates in excess of the national average. Blackpool was the only Lancashire authority where under 40% said they were in very good health. With 9.5% of people in Blackpool in bad or very bad health, the rate was more than double the 4.1% recorded in Ribble Valley.
