Estimated life expectancy 2009-13

- Life expectancy at birth for males within the main wards of the neighbourhood, ranges from 88.3 in Tithebarn to 72.4 in Carleton, a gap of 15.8 years.
- For females life expectancy at birth, ranges from 89 in Tithebarn to 76.2 in Marsh Mill, a gap of 12.9 years.

Source: The England rates were calculated by the ONS, whilst the ward rates were calculated locally by Lancashire council.
Ward level health profile

Analysis of the ward level indicators*, on the Public Health England Local Health tool, for the main wards found the following:

- Eight of the wards (Bourne, Carleton, Hambleton and Stalmine, Hardhorn and High Cross, Preesall, Norcross, Tithebarn and Victoria) have a significantly smaller proportion of their residents **providing 1 or more hours of unpaid care per week**, than the national average.

- Eight of the wards (Breck, Carleton, Hambleton and Stalmine, Hardhorn and High Cross, Preesall, Norcross, Tithebarn and Victoria) all have a significantly higher proportion of residents self reporting **living with a limiting long term illness or disability**, than the national average.

- Five of the wards (Carleton, Hambleton and Stalmine, Hardhorn and High Cross, Preesall, Norcross, Tithebarn and Victoria) have a significantly smaller proportion of their residents **providing 50 or more hours of unpaid care per week**, than the national average.

*Marsh Mill is not currently available as a ward on Local Health and is incorporated within the Norcross and Victoria wards.
The neighbourhood has a recorded disease prevalence significantly above England, for 16 out of 20 QoF indicators examined.

Urgent care

- In 2014/15 there were 10,904 urgent care attendances, involving 7,948 patients registered to the practices of this neighbourhood.

- This gives the area an patient to attendance ratio of 1:1.4.

- The neighbourhood has a crude attendance rate per 1,000 of 212.96, significantly below the CCG rate of 222.58.

- 32% of male patients were aged 65 or over, compared to 43% of females patients.

- 7% of male attendances involved patients aged 0-4, compared to 5% of female attendances.

- There were 106 patients with 5 or more attendances, including 11 patients who attended 10 or more times.

Source: SUS_CDs
Non-elective admissions

- In 2014/15 there were 6,463 non-elective admissions into secondary care, from patients registered to the practices of this neighbourhood.

- This gave the neighbourhood a crude admissions rate per 1,000 of 126.23, significantly below the CCG rate of 132.94.

- 59% of NEL admissions involved female patients.

- 48% of male patients were aged 65 or over, compared to 40% of female patients.

- 18% of male admissions involved patients aged 0-4, compared to 11% of female admissions.

- There were 92 patients with 5 or more admissions, including 7 patients who were admitted 10 or more times.

Source: SUS_CDs
Adult support

- We were able to identify 664 individuals who are registered to the seven practices of this neighbourhood and who are currently receiving 865 social care support services (Correct as of December 2015)

- 78% (672) of services were for long term support

- 65% (562) involved female patients

- 79% (685) involved persons aged 65 or over

- The age range was 19 to 103, average age is 75, the median age is 81

- The top three primary support reasons where:
  - Physical Support - Personal Care Support – 44% | 383 services
  - Physical Support - Access and Mobility Only – 27% | 235 services
  - Support with memory and cognition – 11% | 96 services

Source : Extracted from Lancashire county council LAS system – 09/12/2015
In December 2015 were a total of 16 children in care support placements across the main wards of this neighbourhood.

- 11 of the 16 (69%) were male
- Their ages ranged from 2 to 16, with an average age of 12 and a median age of 13
- The majority were from a white British background
- In most cases the children were receiving care for ‘abuse or neglect’
- 10 were staying with foster carers
