

Weekly update for coronavirus figures in the county

Wednesday 25 November 2020

How is coronavirus affecting people in Lancashire?

This is a weekly bulletin produced by the Lancashire Resilience Forum with the latest figures on the number of coronavirus-related cases and deaths in the county, as well as figures at a unitary and district level.

It also shows how Lancashire compares to other areas of the country.

Confirmed cases from positive 'pillar 1 and 2' tests up to 24 November 2020

LANCASHIRE

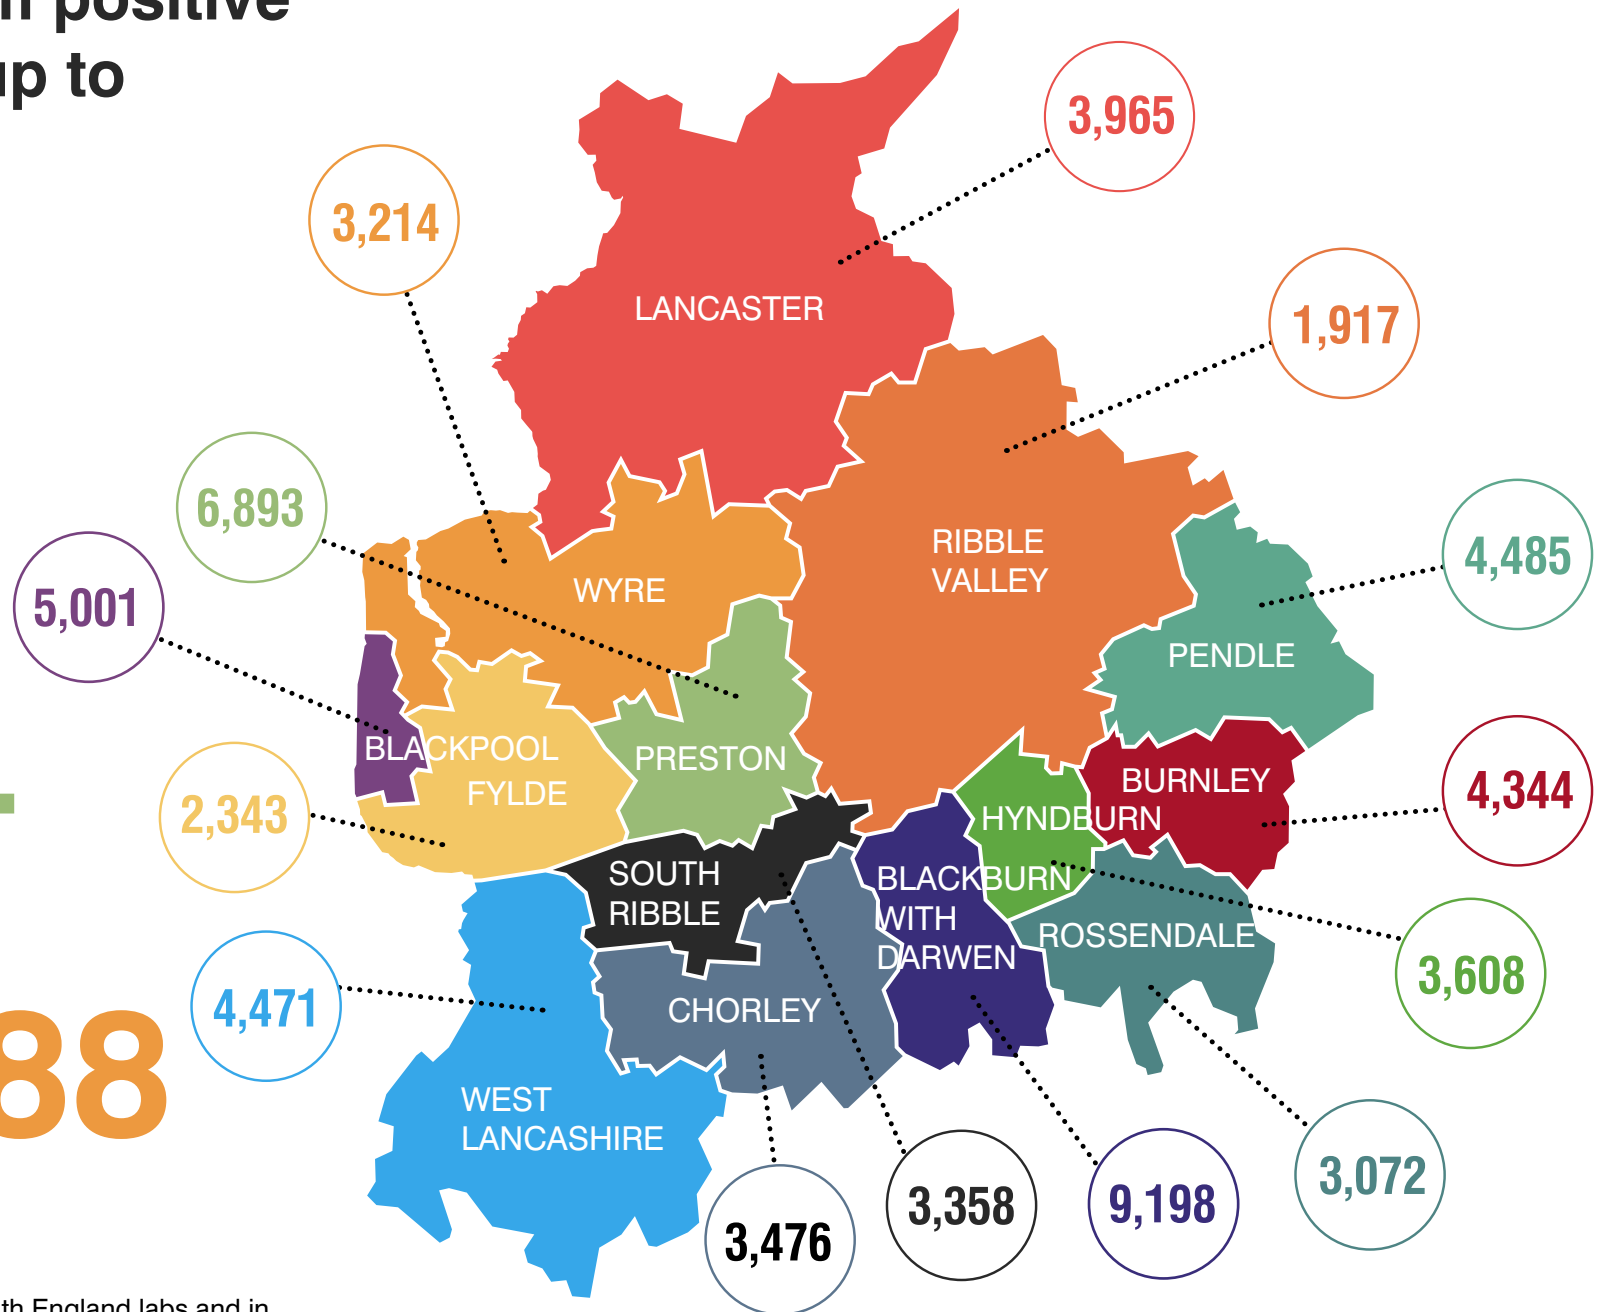

59,345

NORTH WEST

294,644

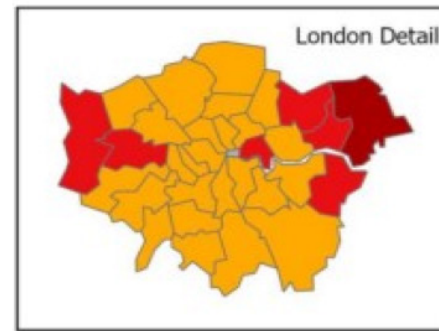

ENGLAND

1,314,888

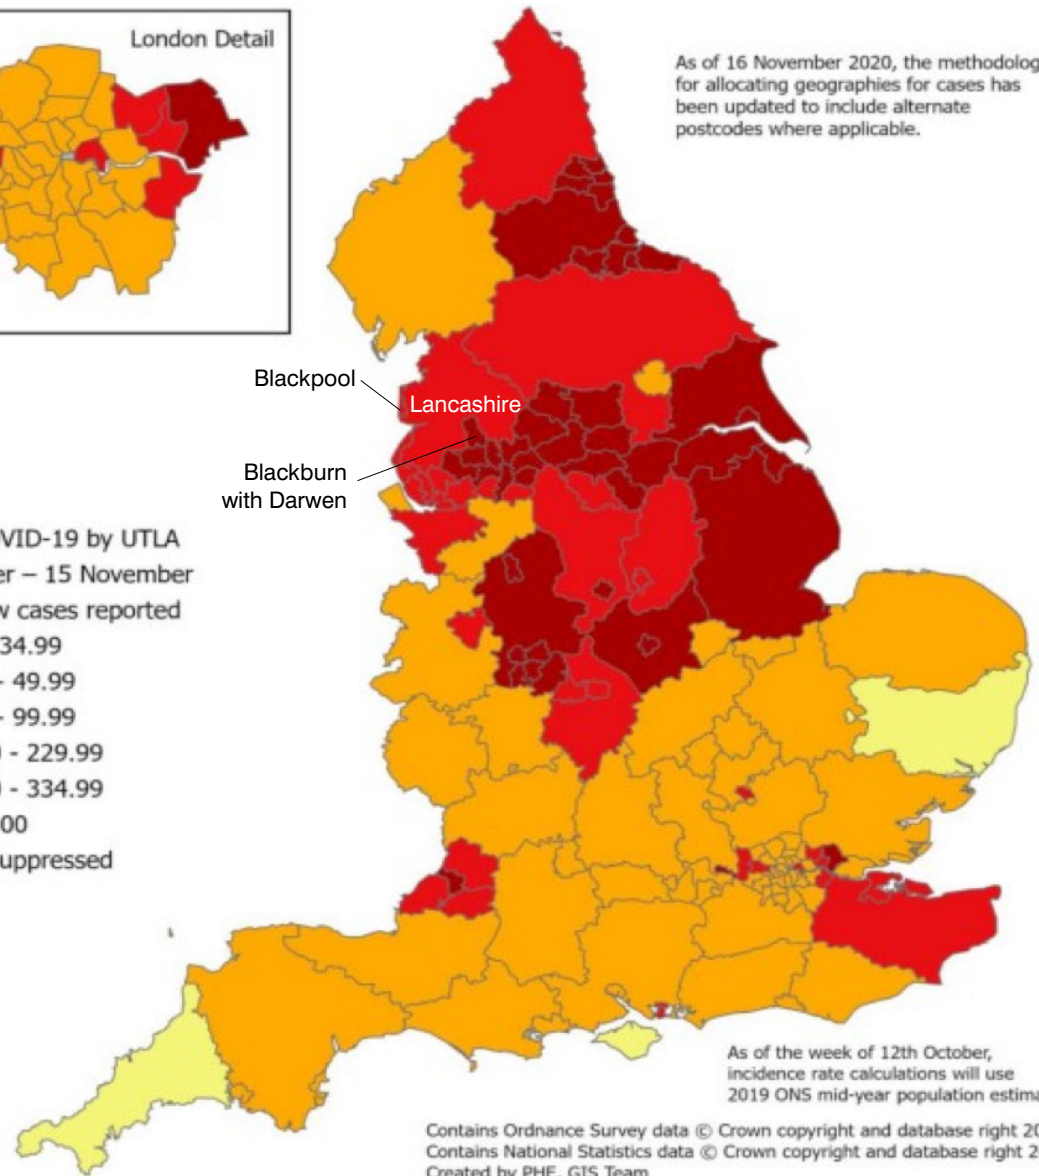

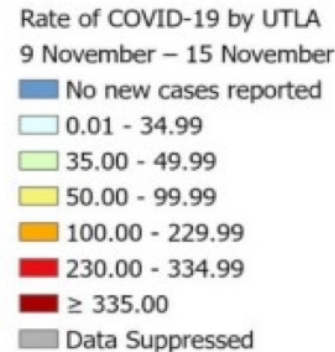

These figures are from tests carried out in Public Health England labs and in the NHS (Pillar 1) and from other testing routes, such as mobile labs (Pillar 2).

Weekly rate of Covid-19 cases per 100,000 population tested under pillar 1 and pillar 2 (Week 46 - data between 9 November and 15 November 2020).

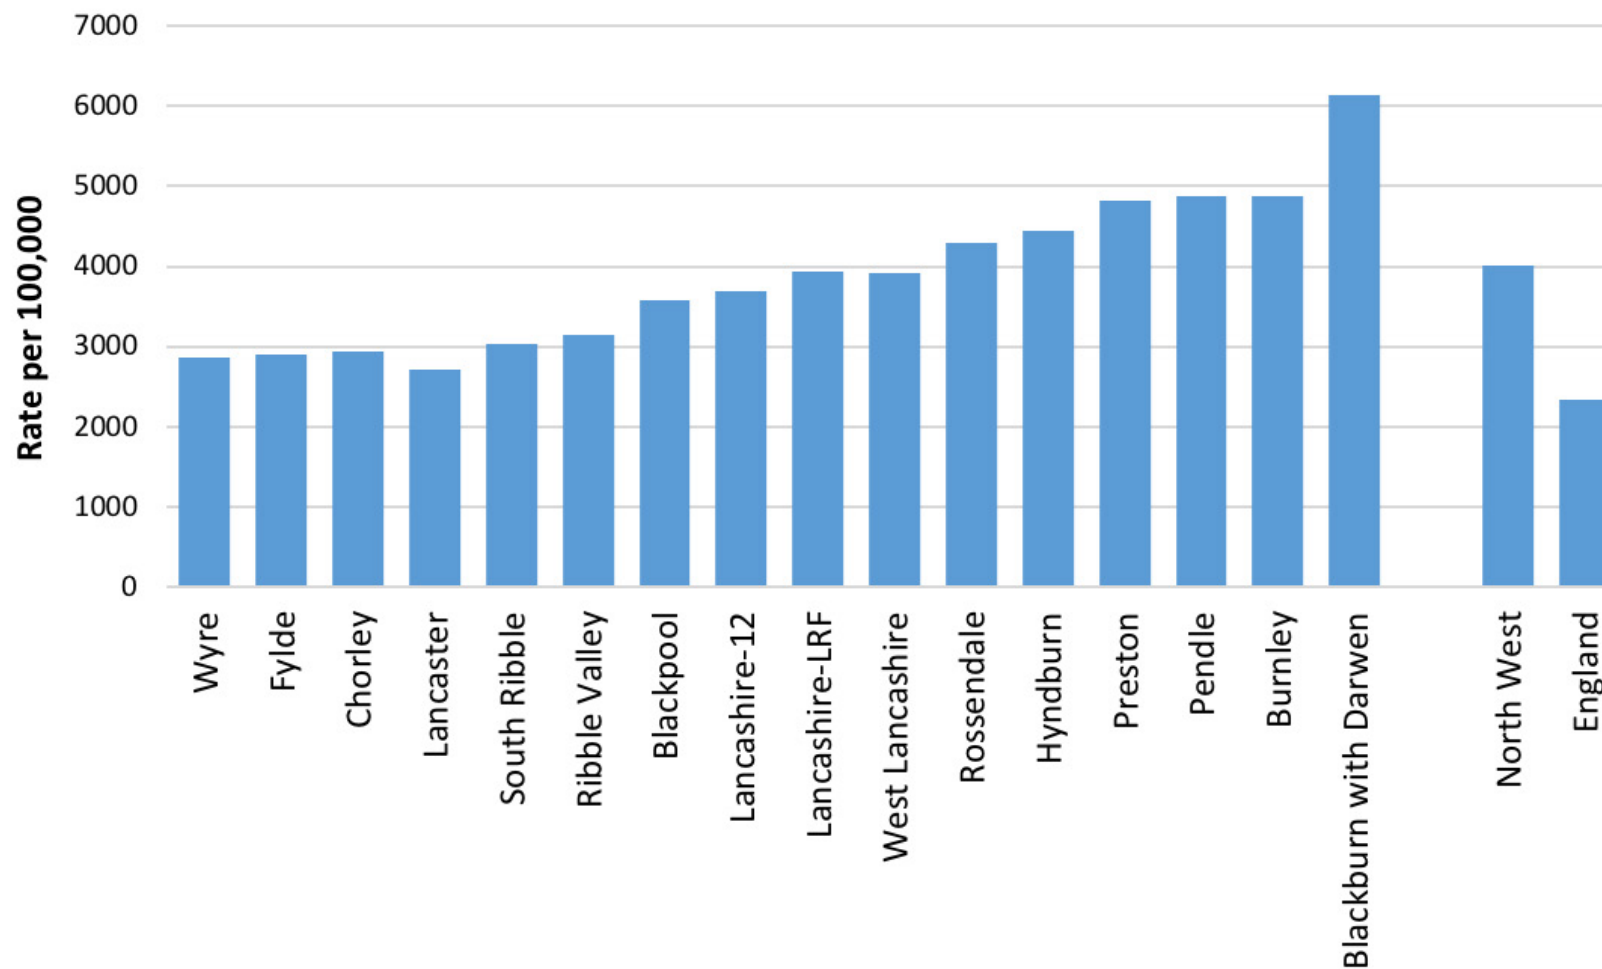

As of 16 November 2020, the methodology for allocating geographies for cases has been updated to include alternate postcodes where applicable.

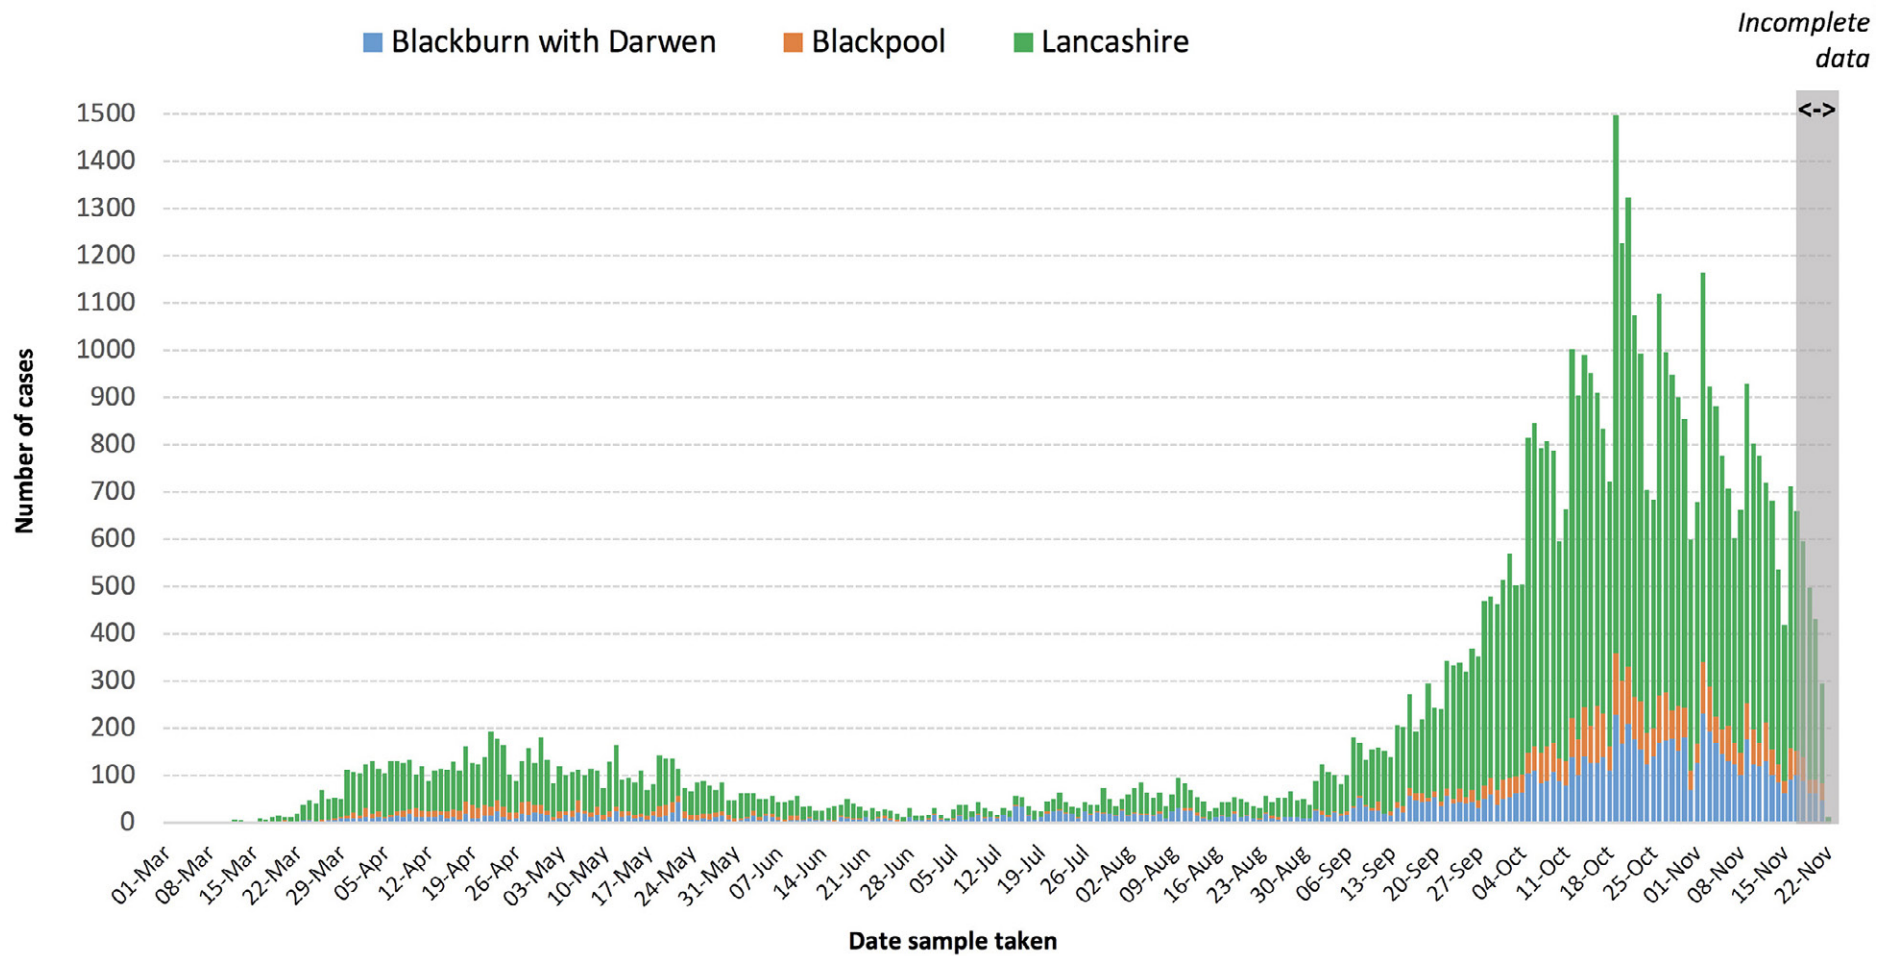

For rate of cases detected via Pillar 1 & 2 testing:
A notable improvement for the Lancashire 14 as they move away from the highest category into the second highest.

Pillar 1 = swab testing in PHE labs & NHS hospitals for those with a medical need and key workers & their families
Pillar 2 = testing by commercial partners - swab testing for the wider population from out in the community

Cumulative lab-confirmed cases up to 24 November 2020, rate per 100,000

Daily pillar 1 and pillar 2 lab-confirmed cases to 22 November

Positive tests are counted according to the date the sample was taken. However, most swabs taken in recent days will not yet have produced a result, so it is important not to jump to the conclusion that the epidemic is tailing off quicker than it really is. The PHE website cautions that only data from five days or more ago can be considered complete. The greyed-out columns in figure above are liable to be added to as more results come in.
