

Weekly update for coronavirus figures in the county

10 March 2021

How is coronavirus affecting people in Lancashire?

This is a weekly bulletin produced by the Lancashire Resilience Forum with the latest figures on the number of coronavirus-related cases and deaths in the county, as well as figures at a unitary and district level.

It also shows how Lancashire compares to other areas of the country.

Confirmed cases from positive 'pillar 1 and 2' tests up to 7 March 2021

LANCASHIRE

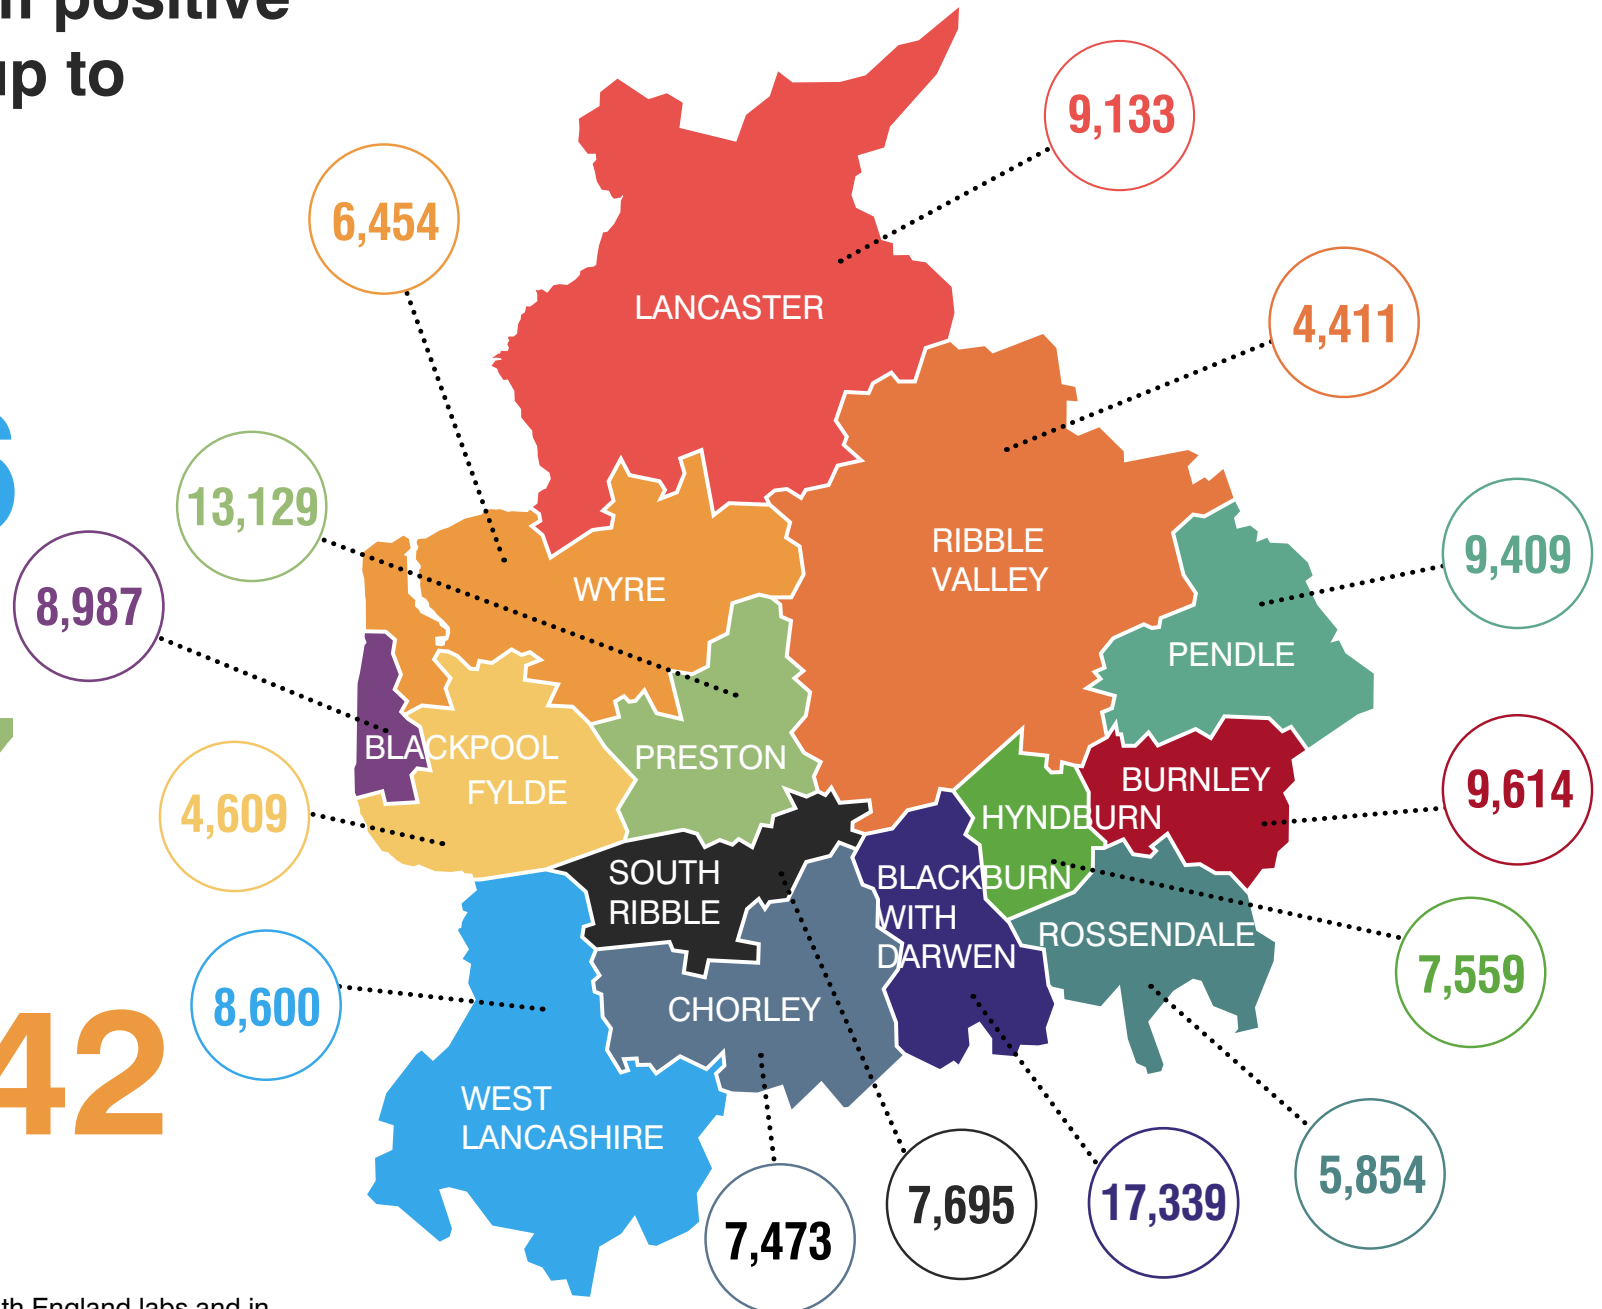

120,266

NORTH WEST

582,497

ENGLAND

3,698,242

These figures are from tests carried out in Public Health England labs and in the NHS (Pillar 1) and from other testing routes, such as mobile labs (Pillar 2).

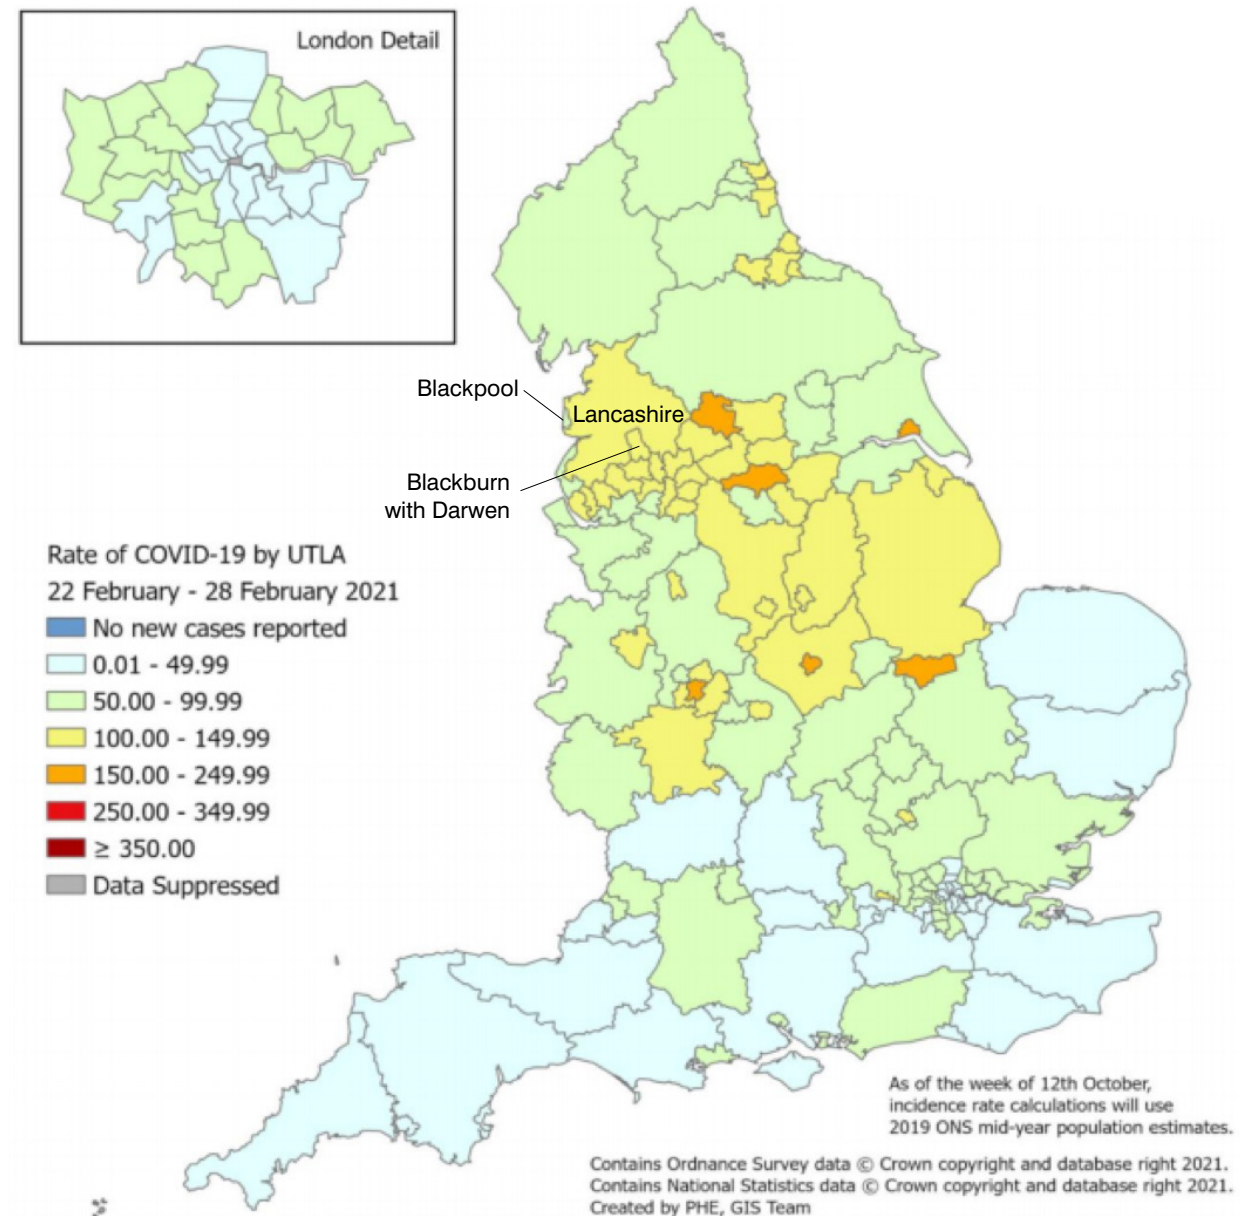

Weekly rate of Covid-19 cases per 100,000 population tested under pillar 1 and pillar 2 (Week 8 - data between 22 February and 28 February 2021).

For rate of cases detected via Pillar 1 & 2 testing:

Blackpool's rate is in the second lowest band and Blackburn with Darwen and Lancashire's rates are in the third lowest rate band

Pillar 1 = swab testing in PHE labs & NHS hospitals for those with a medical need and key workers & their families

Pillar 2 = testing by commercial partners - swab testing for the wider population from out in the community

Cumulative lab-confirmed cases up to 7 March 2021, rate per 100,000

Daily pillar 1 and pillar 2 lab-confirmed cases to 7 March 2021

Positive tests are counted according to the date the sample was taken. However, most swabs taken in recent days will not yet have produced a result, so it is important not to jump to the conclusion that the epidemic is tailing off quicker than it really is. The PHE website cautions that only data from five days or more ago can be considered complete. The greyed-out columns in figure above are liable to be added to as more results come in.

Number of beds (excluding HDU/ITU/IDU) with COVID-19 patients on specified date	382	424	439	423	338	271	247	164

The hospital admission figures are of people who had a confirmed case of COVID-19 in the 14 days prior to admission.

The weekly inpatient diagnoses are patients who received a confirmed COVID diagnosis after being admitted to hospital.

The in hospital data used is a subset of the data that is published monthly by the NHS here: <https://www.england.nhs.uk/statistics/statistical-work-areas/covid-19-hospital-activity/> It will not be made available at an organisation level.

Figures only include data for NHS Acute Trusts

Count of deaths identified as Covid-19 on death certificates and occurred up to 26 February but were registered up to 6 March 2021

LANCASHIRE

TOTAL 4,106

Up to the 06 March, the number of deaths where COVID-19 was mentioned on the death certificate:
4106 registered in the Lancashire LRF area
3201 registered in the Lancashire County Council area

Deaths due to Covid-19* - age standardised rate per 100,000 population, all persons - March 2020 to January 2021

Blackburn with Darwen and Blackpool's COVID-19 mortality rate is significantly worse than the England rate.
The Lancashire County Council area's rate is also significantly worse than England.
Along with the Lancashire County Council area, the individual authorities of Burnley, Pendle, Preston and Hyndburn are significantly higher than England.
Only Lancaster and South Ribble's rates are significantly lower than the England rate.

*Deaths registered where Covid-19 was the underlying (main) cause of death

Population/cohort size (denominator) definitions

The estimates of population size can be used as a denominator to approximate or calculate vaccination coverage percentages. Two denominators are used:

- 1- Office for National Statistics (ONS) 2019 mid-year population estimates are provided as the official statistics and the best publicly available population estimates.
- 2- ONS population estimates are considered the most accurate estimates available at national level. They are less robust at smaller areas and for particular groups, so National Immunisation Management System (NIMS) denominators are also provided for local authorities. These can be used for comparing areas within cohorts, but should not be used for comparing across cohorts, as the level of overestimates within the NIMS data vary across age groups. Coverage can be viewed as being 'at least' the figures presented using the NIMS denominator, with ONS providing the best official estimate.

Details of the two denominators

The ONS population estimates are consistent with what is presented in the UK COVID-19 vaccines deployment plan and provide a reference point on progress. They are considered to be best publicly available population estimates, as used by local authorities and other public bodies for planning purposes. However, population estimates are subject to a degree of uncertainty, as they are 2019 estimates based on the 2011 Census.

The NIMS dataset facilitates management of the vaccination programme at more granular levels, but is an over-count of the population as named individuals may be registered twice, or those may have left the country. NIMS also does not include the majority of who are not registered with a GP, including many people who are homeless, so is incomplete.

Vaccine data
